

Inventory AI

Inventory in health and wellness retail is a complex balancing act—managing product lifecycles, expiration dates, seasonal demand, and compliance requirements across thousands of SKUs. Whether it’s supplements, personal care items, or holistic remedies, poor inventory visibility leads to overstock, spoilage, or lost revenue.

Hypersonix Inventory AI brings intelligent, real-time inventory optimization to health and wellness retailers. It ensures you're stocked with the right products—where and when customers need them—while minimizing waste and maximizing turn efficiency.

Key Features

SKU-Level Inventory Optimization

Monitors sell-through rates, demand patterns, and shelf life to deliver precise restocking recommendations for every product.

Best Fit: Ensuring fast-moving supplements like probiotics or multivitamins are always in stock, while limiting overstock on niche SKUs.

Expiry & Compliance-Aware Inventory Planning

Flags inventory nearing expiration and aligns replenishment with shelf-life standards and regulatory timelines.

Best Fit: Managing inventory for ingestibles, tinctures, or wellness shots with strict expiry windows.

Seasonal & Trend-Responsive Replenishment

Adapts inventory plans to reflect seasonal changes, marketing campaigns, and emerging wellness trends.

Best Fit: Scaling up immune support or hydration products during cold/flu season or heatwaves.

Store & Channel-Level Stock Balancing

Optimizes inventory across physical locations and digital storefronts, accounting for regional demand and fulfillment capacity.

Best Fit: Rebalancing stock of aromatherapy kits or personal care bundles between retail stores and online DCs.

Low-Turn & Excess Inventory Management

Identifies slow-moving SKUs early and recommends markdown, bundling, or redistribution strategies.

Best Fit: Preventing waste from underperforming wellness teas or overstocked fitness supplements.
